

# THE PALM BEACH POST

WEST PALM BEACH, FLORIDA, SUNDAY, NOVEMBER 29, 1925

merican lieutenant, Hamilton, flowers on his grave.

bronze statuette of Ammon-Ré, Egyptian sun god, has been un-  
l at Frejus in the department  
r, by workmen digging for the  
tion of a new villa and  
gh its authenticity is attested  
Academy of Inscriptions and  
Lettres, how it ever came to  
far from ancient Thebes re-  
a mystery.

statuette is of unusually fine  
manship, the features being  
moulded. Above the head is  
a tablet covered with hiero-  
glyphs. The academy's most learned  
scholars are trying to decipher  
the writing in the hope that they  
may throw some light on the his-  
tory of the figurine and its wander-

Painleve, until this week  
of France, has had his small  
trials difficulties as well as the  
ones that caused the crash of  
binet. A few days ago in the  
of a small Paris hotel he pre-  
sented the spectacle of a literally  
"French premier and minister  
of finance trying in vain to find five  
something less than a quar-  
ter which to buy an artificial  
to aid of Earl Hat's fund  
subsidized British soldiers.

Painleve was leaving a lunch-  
his honor given by the Anglo-  
can press association of Paris  
he was asked to buy a poppy,  
arched all the pockets of his  
s prince Albert coat and all  
of his and trousers pockets for a  
but without success. Only the  
arrival of his chief secretary  
ad came to remind the absent-  
premier that he had an im-  
portant meeting with the chamber's  
committee saved him. The  
party treated his chief to a pop-

py and the national honor was saved.  
Embarrassed by this incident M.  
Painleve made a grab for his over-  
coat. He got one, but not his own.  
It belonged to his minister of the  
budget, M. Bonnet. Finally France's  
two financial chiefs straightened out  
their garments and departed but not  
until the premier, who has no mem-  
ory for faces, had made the day  
complete with another instance of his  
absent-mindedness. He warmly  
shook hands with an American jour-  
nalist whom he had challenged to  
a duel in 1917 on account of the  
journalist's criticisms of the spring  
offensive of that year and whom he  
had engaged in a lively press con-  
troversy.

Monte Carlo is threatened with a  
rival in the nearby Mediterranean.  
Next spring a new city is to be built  
outside Valletta, the capital of  
Malta, Paris has learned, and Pre-  
mier Ugo Pasquale Mifsud of Malta,  
is quoted as saying that no expense  
would be spared to make the new  
gambling center without an equal  
in the world. It is reported the Mal-  
tese Monte Carlo will have theatres,  
grounds for various forms of sport.

## AIR ENGINE PARTS NOW USED ON AUTO

### Cadillac Employs New Type of Aluminum Alloy for Bearing Caps

A new type of aluminum alloy  
casting for bearing caps, formerly  
used only in aviation engines, is now  
used by the Cadillac Motor Car com-  
pany on the three main bearing caps  
of its crankshaft.

Former practice was to use an  
alloy of aluminum with copper,  
which had the required stiffness, but  
needed to be reinforced with a steel  
plate. In the new practice a quality  
of aluminum known as Y-metal, with  
a mixture of nickel, copper, and

ultra-modern hotels and a sumptu-  
ous casino, with roulette and other  
forms of gambling.

magnesium, is cast in a steel die in-  
stead of in sand, a far more accurate  
method. Afterwards it is heat-  
treated. In this process the caps  
are cast much closer to size, are more  
uniform and require less finishing,  
thereby reducing cost.

"Only within the last five or six  
years has the heat-treating of  
aluminum, the same as of steel, be-  
come a production method and it is  
not yet in general use," according to  
L. A. Danse, Cadillac metallurgical.  
"With the process used in our bear-  
ing caps it is possible to obtain a  
breaking strength up to 45,000  
pounds per square inch.

"The process," he continues, "is  
one of the methods by which Cadil-  
lac has been able to produce the new  
car with better quality and less cost."

The metallurgical department of  
the Cadillac Motor Car company is  
a great laboratory in which tests are

made of all materials used in the car  
and in which new and improved  
classes of metal are discovered for  
use.

Today in the new Cadillac found-  
ries even the sand is carefully ana-  
lyzed. Five different kinds of sand  
are required for work in the iron,  
aluminum, bronze and brass found-  
ries. Even the analysis of the sand  
and control of its quality has a vital  
effect upon the quality of the cast-  
ings and in the amount of subsequent  
work required in the manufacturing  
processes.

### CASH FOR CORKS

London, Nov. 23.—The only use an  
American can find for a liquor bot-  
tle cork is to smelt it, but the Lon-  
doner finds the corks more valuable.

## NEW INVENTION SAVES MILLIONS

### A Lamp that Burns 94% Air

A new oil lamp that gives an  
amazing brilliant, soft, white light,  
even better than gas or electricity,  
has been tested by the U. S. Govern-  
ment and 35 leading universities and  
found to be superior to 10 ordinary  
oil lamps. It burns without odor,  
smoke or noise—no pumping up, is  
simple, clean, safe. Burns 94 per cent  
air and 6 per cent common kerosene  
(coal oil).

The inventor, P. K. Johnson, 642  
N. Broad St., Philadelphia, is offer-  
ing to send a lamp on 10 days' FREE  
trial, or even to give one FREE to  
the first user in each locality which  
will help him introduce it. Write  
him today for full particulars and  
ask him to explain how you can get  
the agency, and without expense or  
money make \$250 to \$300 per month.

English breweries enter  
of their product by  
prices for every cork in  
bottle containing their  
When sales of any partic-
